OPSMIND ENTERPRISE SOP: SECURE REMOTE ACCESS & VPN

Document ID: SOP-IT-2026-08 | Department: Information Security & IT Operations

1. MANDATORY SECURITY PREREQUISITES
Remote connectivity to the OpsMind internal neural network and databases requires:
- Company-issued laptop with disk encryption (BitLocker / FileVault) enabled.
- Antivirus definitions updated within the last 48 hours.
- Mandatory Multi-Factor Authentication (MFA) via enterprise hardware token or mobile app.

2. VPN CLIENT CONFIGURATION
Employees must connect exclusively through the GlobalProtect Enterprise Gateway (vpn.opsmind.internal). Direct SSH or unauthorized reverse-proxy tunnels are strictly prohibited by InfoSec policy.

SOP-IT-2026-08 (PAGE 2): SESSION LIMITS & MONITORING

3. AUTOMATIC SESSION TIMEOUT
For security compliance, inactive VPN sessions disconnect automatically after 60 minutes of inactivity.
A maximum single session duration of 12 hours is enforced, requiring daily re-authentication.

4. SPLIT TUNNELING RESTRICTION
Full-tunneling is enforced for all production database access and code repositories.
Personal streaming and high-bandwidth non-work traffic should be performed off-VPN.

5. INCIDENT REPORTING
Any unrecognized login alert or authentication prompt must be immediately reported to
infosec-soc@opsmind.internal or emergency extension 4444.
